Improper watering is the #1 cause of plant care problems. The DirectRoot has been proven highly effective in reducing watering problems. By delivering water and fertilizer directly to the roots, AND aerating soil, The DirectRoot can give you the green thumb you always wanted and can make healthy plants even healthier with less time and effort! No other product does so much for so little!

Recommended
Water Spikes per pot:
Pot diameter:

DIRECTIONS: As easy as...

1. Insert Solid Spike into Perforated Spike (to block dirt from entering holes). Push both into soil halfway between stem and the side of the pot...under drip line for outdoor use.

2. Remove Solid Spike only.

3. Your Water Spike is now ready to use! Fill according to the needs of your plant.

*Be sure to periodically water all surface soil to ensure proper root growth. For best results, relocate Spike every 6-8 weeks. Spike stays permanently inside the soil

In an effort to be Earth conscious, everything from package to product is made from recycleable materials.
